

Lab4 - GraphX

Amir H. Payberah

payberah@kth.se

1 Introduction

In this lab you will work with GraphX to process graph-based data. As the assignment 2, we use Apache Toree in this assignment. To do this assignment, copy the given files, including `figs` and the `data` folder, to the folder you have started the Jupyter Notebook. Then, you should be able to see the two files `graphx_social_network.ipynb` and `graphx_songs.ipynb` on your browser on the address `localhost:8888`. The files are self-explanatory that describe what you need to do.
